Installation instructions

Next Gen Multi-Base

Measure and cut to required size

For wooden sub-floors, Next Gen Multi-Bases are recommended to be fixed by nailing with a ring shank flooring nail regularly in the pre-formed holes (nails sold separately).

For concrete sub-floors, Next Gen Multi-Bases may be fixed by nailing with concrete flooring nails, or adhering by using products such as MJS GF400 adhesive.

Finish installation with the desired type of Multi-Base cover strip in the required colour.

Multi-Base cover strip

Cut the selected MJ16, MJ42, MJ43 or MJ44 cover strip to required length. Install the cover strip by aligning the channel above the Next Gen Multi-Base, carefully tap down the cover strip using a hardwood block with non marking surface and a hammer to lock in place.

Safety statement: When cutting or drilling aluminium we recommend the use of safety glasses and gloves.
