

Raw Oak Scotia Range

RECOMMENDED FOR

RAW OAK SCOTIA is an ideal finish at the edges of natural timber floors.

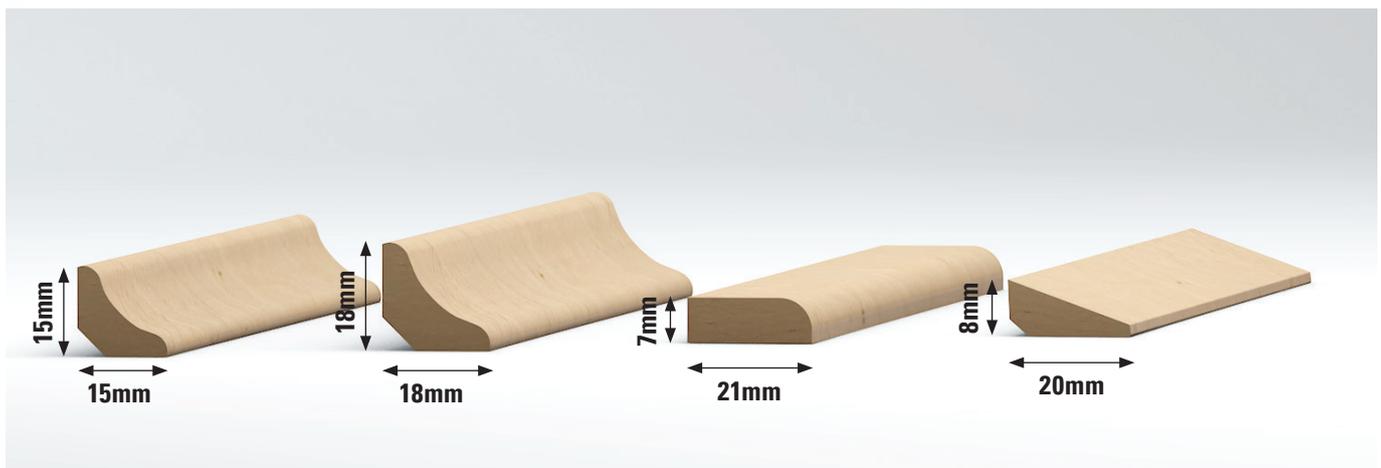

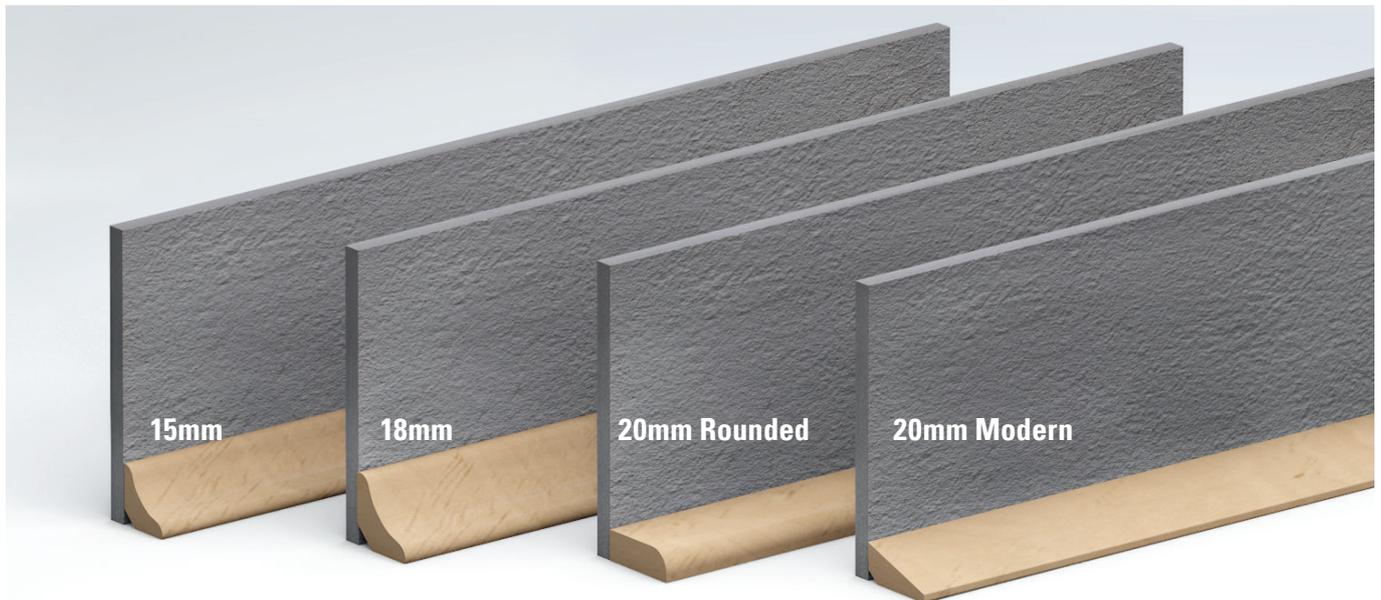

They are easy to fit with new floor coverings or to retro fit against existing skirtings when floor finishes are replaced.

Their width allows a perimeter expansion for floating floors without the need to undercut or raise old skirtings.

A choice of scotia styles is available to allow the maximum expansion needed.

RAW OAK SCOTIA provides a neutral colour base so the installer can colour the trim to any type of timber finish.
